Create Application Transfer File

ServTraQ offers two ways to transfer records into CORE:

1. **Generate Transfer File** – records are exported to an Excel file and manually imported into CORE.
2. **Transfer through CORE Web Service** – records are transferred electronically and an application status is returned. (**CURRENTLY UNAVAILABLE**)

1. Generate Transfer File

This feature exports the applications into an Excel spreadsheet and generates a Transfer File. Users must log in to CORE to import the file, retrieve rejected records, and then manually log any rejection reasons into ServTraQ.

To generate a transfer file, select the applications that are ready to be transferred. Individually select the applications OR click **Select All**.
